COMMENT: Questions relevant to PUMAS were asked of all individuals except those born during the reference year (who have <12 months of activities to report). There are 317 children in the data who are <1 year old. They have been recoded to 298 (Not Emp; other activity n.e.c.) to be consistent with all other children who have not yet started school.

LIBRICATION RULES:

This variable is constructed from the number of months spent in each of the following activities during 2009: military service, full-time dependent employment, self-employment, part-time dependent employment, unpaid family business, paid sick leave, retirement, education, housecare, unemployment, unpaid leave, and other activity. The sum of all months in all activities is at least 12, but can be more (i.e., more than one activity in a month). We cannot infer usual main activity from the data when there is more than one activity per month, which occurs in 6.3 percent of the sample. For example, if an individual is employed for 4 months, self-employed for 4 months, and in education for 8 months, it is not possible to determine if the employment months were concurrent, and, therefore, whether the person was in employment for most of the year. We use the following rules for determining main activity status:

- A person is defined as mainly employed during the year if he/she has:
 - more than 6 months in military service or full-time dependent employment, regardless of other activities. This assumes that military service is full-time employment.
 - more than 6 months in any or all employment if there are exactly 12 months of reported activities.
 - more than 6 months in any specific employment activity (military, full-time, self-employment, part-time, or unpaid family work) if there are no individual non-employment activities lasting at least 7 months.
- A person is defined as mainly not employed if he/she:
 - is not mainly employed in (1);
 - has at least 7 months of non-employment activities; and
 - has more months in non-employment activities than in employment activities.
- In all other cases, it was not possible to determine the main activity status (cases coded in the 900s). These include:
 - 6 months or less in primary employment activities and same number of employment activities as non-employment activities
 - greater than 6 months in both non-employment and non-full-time employment (self-employment, part-time, unpaid family work).
- Within the mainly employed and the mainly not employed categories, a person is assigned to a specific subgroup if he/she has more than 6 months in that category, with the following priority:
 - military service;
 - full-time dependent employment;
 - self-employment;
 - part-time dependent employment;
 - unpaid family work;
 - retirement;
 - education;
 - housecare;
 - paid sick leave (for the employed);
 - unpaid sick leave (for those not employed);
 - other non-employment activity; and
 - unemployment.

					27,841	

WARNING: Includes only weeks in full-time dependent employment and military service; weeks on paid leave, self-employment, and unpaid family business are not included since there is no information about whether these activities are full-time.

WARNING: Because it is not possible to determine if full-time employment and military service are concurrent, it is impossible to determine total weeks worked full-time for those with less than full-year employment in both activities. For these case, the number of weeks in the longest employment activity is provided and is coded as 1000+# weeks in longest activity (6 cases).

COMMENT: Weeks in paid sick leave include leave for sickness or maternity, while weeks in unpaid leave include maternity, paternity, parental and sick leave.
 WARNING: Because it is not possible to determine if paid and unpaid leave are concurrent, it is impossible to determine total weeks in leave for those with less than full-year in both paid and unpaid leave. For these case, the number of weeks in the longest leave is provided and is coded as 1000+# weeks in longest activity (14 cases).

COMMENT: For those with at least 6 months of military service, the main job is defined as military service. For those with less than 6 months of employment (excluding military service), the main job is defined as the one with the highest number of work hours or the highest income. For those with less than 6 months, the main job is any employment during the year. If there is more than one employment activity, the main job is determined in the following order of priority (1) military service; (2) dependent employment (incl. full-time, part-time and paid leave); (3) self-employment; and (4) work in unpaid family business.

COMMENT: The main employment activity is defined by the data provider as the job with the most work hours or the highest income for those with at least 1 month of employment (excluding military service). Military service is defined as the main employment activity (and is assigned a value of 282) to those individuals who: (1) are in military service 6 months or more; or (2) have any military service if months in service exceeds months in other employment.
