Industry Not available Income Income Reference period 1996 (entire calendar year) Unit of collection Mostly individual, with the exception of in-kind incomes, incomes from abroad and income from the sale of farming products, which are collected at the household level.
Income Reference period 1996 (entire calendar year) Unit of collection Mostly individual, with the exception of in-kind incomes, incomes from abroad and income from the sale of farming products, which are collected at the household level.
Reference period 1996 (entire calendar year) Unit of collection Mostly individual, with the exception of in-kind incomes, incomes from abroad and income from the sale of farming products, which are collected at the household level.
Unit of collection Mostly individual, with the exception of in-kind incomes, incomes from abroad and income from the sale of farming products, which are collected at the household level.
and income from the sale of farming products, which are collected at the household level.
household level.
Period of collection Monthly amounts and number of months are collected for income from work
(with the exception of a few irregular sources and income from business) and the
main social benefits (pensions, sickness and unemployment benefits, child and
parental allowances); all other incomes are collected in annual amounts.
The derived file though, only has annual incomes.
Gross/net Income from the main employment and income from business are collected gross
of taxes, and the amounts of income tax (for physical persons) and income tax
from business are also collected; all other incomes are collected net of taxes. The
derived file though, only has income net of taxes and contributions.
Data editing / processing
Consistency checks The Statistical Office carries out some corrections of income information.
Weighting One household weight.
Imputation

This document is based upon documentation of the Microcensus from the Statistical Office and from the World Bank paper "A snapshot of poverty and living conditions in the Slovak Republic", by Diane Steele.

Table of contents:

- A. General Characteristics
- B. Population, sample size and sampling methods
- C. Data collection and acquisition
- D. Definition of the survey units
- E. Contents
- F. Quality of data
- G. Uses of the survey

A. General characteristics

Official name of the survey/data source: Microcensus

Administrative Unit responsible for the survey:

Statistical Office of the Slovak Republic Address: Mileticova 3 - 824 67 Bratislava - Slovakia Web: http://www.statistics.sk

Microcensus data have been collected in the Slovak Republic since 1958 when it was part of the former Czechoslovakia as regular income surveys conducted every 3-5 years on 1-2 percent samples of households. Microcensus data describe annual household incomes, housing and equipment of households with durable goods. Respondents were asked to recall the information about the previous year. There is no expenditure information included in the Microcensus data.

B. Population, sampling size and sampling methods

Sample size

The database contains information on 16,336 households (i.e. approximately one percent of all households in the Slovak Republic) and 50,906 individuals.

Coverage

The entire Slovak population and territory are covered. However, there is some evidence that some minority groups (such as the Roma) are consistently undersampled (in spite of

the fact that the Statistical Office has stated that they are included as part of the sampling frame) 1 .

C. Data collection and acquisition

Data collection period

The survey was administered in March 1997 and asked respondents to provide information on their income in 1996 (entire calendar year).

D. Definition of the survey units

There are 3 units of observation, the dwelling, the household and the individual, whereby a dwelling (i.e. a flat) can be composed of several "common-keeping" households.

E. Contents

The dataset consists of four parts (whereby LIS only received the last one):

- *dwelling observation*, including identification variables, data on flat and costs of dwelling, and data on fuel consumption;
- *household observation*, including identification variables, data on household income (income from abroad, own consumption and income from the sale of farming products), data on equipment of household with selected durables and data on the social situation of the household;
- *individuals observation*, including identification variables, demographic data, and data on money income in the year 1996 (split into income from work, social income and other income);
- derived *household observation*, including identification variables, demograhic data on head and spouse, and household incomes

Lacks

There is no expenditure information included in the Microcensus data.

Moreover, because of privacy legislation, it is impossible to identify households or individuals by ethnicity.

F. Quality of data

Data editing, validation, imputation

Under the communist regimes prior to the separation of the Czech and Slovak Republics in 1993, wages and pensions were always verified by employers (wages and benefits paid by them) and post-offices (pension benefits). These checks are no longer done as

¹ See "Slovak Republic – Living standards, Employment and Labour Market Study" World Bank Country Report, 2002.

rigorously and corrections of income information are made by the Slovak Statistical Office.

Weighting

The dataset contains a weight at the household level.

G. Uses of the survey

Publications

The Microcensus was extensively used by the World Bank for the analysis underlying the 2002 Country Study "Slovak Republic - Living standards, employment, and labor market study".

Poverty and income distribution

According to the above-mentioned report, based on 1996 Microcensus data, poverty measured as the percentage of households whose equivalent income (as calculated according to LIS methodology) below 50% of median equivalent income was 5.9 in 1996.

According to the World Income Inequality Database, the Gini index (based on Household Budget Survey data for 1996) is 24.83. This index was calculated for the entire territory and population, for the net income concept at the household per capita reference unit.
