

Original survey information, Australia 2008

<b>Generic information</b>	
Name of survey	Survey of Income and Housing (SIH).
Responsible institution	Australian Bureau of Statistics (ABS), <a href="http://www.abs.gov.au">http://www.abs.gov.au</a>
Main objective	The principal objective is to facilitate the analysis and monitoring of the social and economic welfare of Australian residents in private dwellings.
Structure of data source	Cross-sectional household survey data.
Frequency	Annually from 1994-95 to 1997-98, and then in 1999-00, 2000-01, 2002-03, and every two years since 2005-06.
Survey year / Wave	2007-2008 survey.
Coverage	Information was collected from usual residents of private dwellings in urban and rural areas of Australia (excluding very remote areas). Usual residents excludes: households which contain members of non-Australian defence forces stationed in Australia, and households which contain diplomatic personnel of overseas governments.
<b>Sampling</b>	
Sampling procedure	The sample was designed to produce reliable estimates for broad aggregates for household residents in private dwellings for Australia, for each state and for the capital cities in each state and territory. Dwellings were selected through a stratified, multistage cluster design from the private dwelling framework of the ABS Population Survey Master Sample.
Sample size	9,345 households, including 18,326 individuals.
<b>Collection</b>	
Collection period	August 2007 to June 2008
Collection mode	Computer assisted interview
Description of instruments	Information was collected using: - a <i>household level computer assistend personal interview questionnaire</i> , which collected information on household characteristics, housing cost and certain assets and liabilities for all households; - an <i>individual level computer assistend personal interview questionnaire</i> , with information on income, certain assets and liabilities and personal characteristics from each usual resident member aged 15 years and over in all households.
<b>Definitions</b>	
Household	A household consists of one or more persons, at least one of whom is at least 15 years of age, usually residing in the same private dwelling. The persons in a household may or may not be related. They must live wholly within one dwelling. In the CURF, the maximum number of household members is topcoded at 6.
Household head	The SIH uses the notion of household reference person. The reference person is determined by applying the following set of criteria in the order listed: 1) the person with the highest tenure when ranked as follows: owner without a mortgage, owner with a mortgage, renter, other tenure; 2) one of the partners in a registered or de facto marriage with dependent children; 3) one of the partners in a registered or de facto marriage without dependent children; 4) a lone parent with dependent children; 5) the person with the highest income; 6) the oldest person.
<b>Data quality aspects</b>	
Non-response error	84% of the initially selected dwellings were included as part of the final sample.
Item non-response / imputation	Imputation took place for missing records and values. Income tax, Medicare levy, family tax benefit, Baby bonus, pension supplement, seniors supplement and utilities allowance were modelled by the ABS.
Weighting	Final weights are calculated through an iterative procedure in which initial weights (inverse of the probability of selection) are adjusted by a calibration process to ensure that survey estimates conform to independently estimated benchmarks (numbers of persons aged 15 and over, numbers of children under age 15, numbers of households, and the value of government benefit cash transfers). The weighting factors exist both at household level and person level and the vast majority of household members have been assigned the same value as the household weight. Besides, the original survey provides 60 replicate weights per record; those were however not used by LIS.
<b>Labour market information</b>	
Eligibility	All persons aged 15 years and over
Employment	Persons are considered employed if, during the week before the interview: - they worked one hour or more for pay, profit, comission or payment in kind in a job or business, or on a farm (includes employees, employers and own account workers) - they worked one hour or more, without pay, in a family business or on a family farm - had a job, business or farm but was not at work because of holidays, sickness or other reason
<b>Income</b>	
Reference period	Income in SIH is collected for two reference periods, the financial year preceding the date of interview and a much shorter one centered around interview time (current income). <i>LIS note: only current income data was provided to LIS.</i>
Unit of time	Several reporting periods, ranging from the whole fiscal year to the usual payment for a period close to the time of intevieiw. All amounts disseminated in the survey were recalculated into weekly amounts.
Unit of collection	Individual level income information is collected for all persons of 15 years of age and older.
Taxes and contributions	Income was collected gross of taxes and medicare levy. Taxes and tax benefits were modelled by the data provider.
Restrictions	The full set of income variables were perturbed by the data provider.
<b>Additional remarks</b>	

Additional remarks

Some variables have had values ranged, collapsed or topcoded.

*LIS note:* LIS was provided a restricted version of basic CURF (Confidentialized Unit Record Files).
