

Original survey information, LIS - Czech Republic 2004

<b>Generic information</b>	
Name of survey	Survey on Income and Living Conditions (SILC)
Responsible institution	Czech Statistical Office / eský Statistický Úad (CSU)
Main objective	To provide a statistical instrument for poverty and inequality studies, a follow up of social cohesion within the relevant territory, the study of population needs and the impact of social and economic policies on households and people, as well as the design of new policies.
Structure of data source	Rotating panel survey: the sample is composed by 4 independent panel subsamples, each of which remains in the survey for four years and then is replaced by a new one. Priority is granted to the production of high-quality transversal data as regards punctuality and comparability.
Frequency	Annual (each year is denominated a survey cycle).
Survey year / Wave	2005 survey , extended with module on intergenerational links.
Coverage	Whole territory of Czech Republic, all private (non-group , non-institutional) households.
<b>Sampling</b>	
Sampling procedure	The sampling design is two-stage design with first stage unit stratification. The first stage is from census enumeration districts. In the second stage the main family dwellings are selected. The sampling frame had to be adjusted to enable incorporation of small census enumeration areas into the sampling process to reach the required full geographical coverage of the national territory.
Sample size	The gross sample includes 7,000 dwellings, 354 (5%) of which were unoccupied or not located.
<b>Collection</b>	
Collection period	April 9th to May22nd 2005.
Collection mode	Data were collected through paper questionnaires (PAPI).
Description of instruments	Data were collected with the following instruments: - Questionnaire A (dwelling unit questionnaire): rooster with the list of all persons with usual residence in the dwelling, their basic demographic and social characteristics, information on sharing of expenses to determine household units and relationship of each person to the main user of the dwelling and to the head of household. - Questionnaire B (household questionnaire): filled in for each household, with information on housing, childcare, financial situation of the household, consumer durables, inter-household transfers paid and received, consumption from household own production (i.e. small scale farming and similar activities), family social benefits, rental income and paid regular taxes on wealth (buildings and land). - Questionnaire C (personal questionnaire): filled in by each household member aged 16+ as of 31.12.2004 (i.e. persons born in 1988 and earlier), with information on labour status and employment, personal income, participation in private pension plans, health, education and selected biographical information. - Questionnaire CM (SILC Module 2005): module on the intergenerational transmission of poverty.
<b>Definitions</b>	
Household	The household definition is based on sharing expenditures (housekeeping concept), based on the declaration of the persons in sampled dwelling unit that they permanently live together and finance together expenditures to cover their needs. Household members include persons temporarily away if the period of actual or foreseen absence is shorter than 6 months and the person has no other private address. For persons studying away from home, the period of absence may be longer than 6 months, provided that the person has no private address and retains financial ties to other household members.
Household head	For couples with or without children it is always the male, regardless of his economic activity. In lone-parent families (one parent with children) and in non-family households (persons not related by marriage or partnership, nor parent - child relationship) the first criteria for determining of head of household was economic activity and the secondary criteria was income of household members. This rule was also applied in more complicated household types (for example in case of sharing of expenditures among more two-parent families).
<b>Data quality aspects</b>	
Non-response error	There were 6,646 addresses which were successfully contacted. Of all households (6,714), 64.8% were successfully interviewed. The remaining 35.2% were refusals, non-contacts, incapacity to participate or other reasons.
Item non-response / imputation	The missing values due to item non-response and the partial unit non-response are fully imputed.
Weighting	The data provider calculated a household cross-sectional weight that corrects for the household non-response and calibrates to external data (including the inflation to total population).
<b>Labour market information</b>	
Eligibility	Individuals aged 16 or above.
Employment	Persons are asked about the current main activity status; those not mainly working are asked whether they did any work during last week. Are routed to the section about job characteristics all persons who are currently mainly working (as self-assessed by the respondent) or who did any regular work for pay or profit last week (or who were temporarily absent from work). The reference period is mostly at the time of interview or last week while some information refers to the calendar year 2004.
<b>Income</b>	
Reference period	Calendar year 2004.
Unit of time	The unit of time is a month for social transfers and to some extent wages; for all other income the unit of time is a year.
Unit of collection	Household level (for rental income, family/children allowances, social assistance, housing allowances, income of persons under 16, transfers between households and income from consumption of own production), and individual level (for all other incomes).
Taxes and contributions	All income components are recorded gross (some incomes in addition are also net) of taxes and social contributions. Taxes and social contributions are reported separately.
Restrictions	-
