Generic information	
Name of survey	Household Expenditure Survey / סקר הוצאות משק הבית
Responsible institution	Central Bureau of Statistics, www.cbs.gov.il
Main objective	To obtain the components of household budgets and to determine the weights of each component in the "consumption
initiani obječti je	basket" that is used in computing the Consumer Price Index. Survey respondents are asked about both their income and
	their expenditure.
Structure of data source	Cross-sectional with monthly rotation of households
Frequency	Annual
Survey year / Wave	2010
Coverage	The survey population includes the entire urban and non-urban population (including the population of East Jerusalem)
coverage	except for kibbutzim, collective moshavim and Bedouins living outside of localities.
Sampling	Except for medium, concertre mostarian and Bedounds from outside of formation.
Sampling procedure	Main sample: two-stage stratified random sampling, with a sample of localities selected in a first phase from a list of
Sampling procedure	localities belonging to the sample population, and a sample of dwellings selected in the second stage from local municipal
	property tax files of local authorities, or from lists of households obtained from municipal secretariats (usually in small
	localities).
	Since the property tax files and household lists in small localities do not cover all dwellings inhabited by households that
	belong to the survey population, complementary samples were taken from additional sampling frames to reduce this non-
	coverage. The interviewing success were allocated by weeks so that a balanced sample would be obtained for each success we
	The interviewing quotas were allocated by weeks so that a balanced sample would be obtained for each quarter-year,
Sample size	according to various socio-economic and geographic characteristics. 6,168 households were successfully interviewed.
Collection	o, roo noisenoiss were successfully interviewed.
Collection period	January 2010 to January 2011. Investigation of the sample was spread across the entire survey period, so that all weeks in
concetion period	the investigation period would be represented.
Collection mode	Direct interview (face-to-face) and diaries
Description of instruments	The survey instruments include:
Description of instruments	- A questionnaire on household structure, which records the basic demographic and economic data on each member of the
	household (e.g., age, sex, country of birth, year of immigration, status at work).
	- A biweekly diary, in which the household recorded each member's daily expenditures over a period of two weeks.
	- A questionnaire on large or exceptional expenditures and on income, which is based on the the household reports related
	to the 3-month or 12-month period preceding the interview date (depending on the rarity of expenditures for the items
	investigated).
Definitions	Investigated.
Household	A group of people who live together in one dwelling and have a joint food budget.
Household head	The economic head of household. The economic head of household is the main earner of the household; i.e. the employed
Household head	person (including a member of the permanent army) who usually works the most hours per week. If there is more than one
	person in the household who fits the definition of head of household or if the household has no earner, the person whom the
	respondent considers to be head of household is defined as the head of household. Note: the head of household is aged 18+
	(except in households consisting solely of persons aged 15–17, and households where the only employed person is aged
	(except in households consisting solery of persons aged $15-17$, and households where the only employed person is aged $15-17$).
Data quality aspects	[13-17].
Non-response error	
Item non-response /	Data concerning compulsory payments were calculated on the basis of the various tax regulations. No imputation was
imputation	made for income that originates in the use of one's dwelling and for various types of in-kind income (non- financial
inputation	income).
Weighting	All members of a given household have the same weighting coefficient that reflects the number of households and persons
	in the survey population, which that household represents. The weighting coefficients for the various groups of households
	were determined in a way that would also assure full correspondence between the survey estimates and the distribution of
	the survey population by sex and age groups, and geographic crosssections based on the current demographic data of the
	Central Bureau of Statistics.
Labour market information	
Eligibility	Each household member aged 15 or over.
Employment	Following definitions are used in the survey:
	- Employee: a person who worked at least one day for another party in return for daily wages, a monthly salary, piece-work,
	or any other kind of remuneration, in the three months preceding the interviewer's visit.
	- Self-employed: persons who work in their own business or farm, who earn their wages out of the income and profits of
	the business.
	Job characteristics were asked from all employed respondents (ie. from both employees and self-employed persons).
Income	
Reference period	Last three months
Unit of time	Monthly amounts
Unit of collection	Household for all income sources (plus individual incomes for income from employed work, self-employed work and work
	related pensions).
Taxes and contributions	Incomes are given gross of taxes and contributions. The data on taxes and social contributions was imputed.
Restrictions	
Additional remarks
