## Data quality aspects

### Non-response error
Non-response rate at the individual level was 13.65%.

### Item non-response / imputation
Item non-response has been fully imputed for all the major income and expenditures items.

### Weighting
Post-stratification weights adjust the design weights so that the age-sex-race marginal totals match the population estimates of Statistics South Africa's Mid Year Population Estimates. Note: LIS uses the post-stratification weight.

## Labour market information

### Eligibility
Individuals aged 15 and older.

### Employment
The employed comprise persons who at time of interview have a paid employment as well as persons who are engaged in casual work or any self-employment activities (including unpaid family workers and persons engaged in the production of economic goods and services for own and household consumption) during the last 30 days.

## Income

### Reference period
30 days preceding interview.

### Unit of time
Income received in the last 30 days (including last month's income from the remittances, 13th cheque, bonus payments, and profit share).

### Unit of collection
All income sources were collected at the individual level for individuals aged 15 and older.

### Taxes and contributions
All incomes were collected net of taxes and social security contributions except for main wage income, which was asked both gross and net of taxes.
